PROFESSIONAL SUMMARY

Full Stack Developer with **1+ year of experience** building production-grade web applications using **Angular, Node.js, MongoDB, and Python**. Delivered a bulk automation system that **doubled throughput to 400–500 tasks/day**. Proficient in **JWT authentication, RBAC, and REST API design**. Currently building **AI pipelines using LLMs (Mistral), vector embeddings, and semantic search** for intelligent document processing.

TECHNICAL SKILLS

Frontend: Angular, React.js, TypeScript, JavaScript, RxJS, NgRx, HTML5, CSS3, Bootstrap

Backend: Node.js, Express.js, Python, RESTful API Design, JWT Authentication, RBAC, Middleware

Database: MongoDB, Mongoose

AI / ML: Sentence Transformers, Vector Embeddings, Semantic Search, RAG Pipeline, LLM Integration (Mistral, Ollama), Prompt Engineering

Cloud & Tools: AWS (S3, CloudFront, Lambda), Git, GitHub, Postman, Linux, Vercel, Render

PROFESSIONAL EXPERIENCE

BornWhiz Technologies — Associate Full Stack Developer

Feb 2025 – Present

Chidambaram, India

AI Knowledge Extraction & Question Generation (Python · LLMs · Vector Search)

- Architecting an **end-to-end RAG pipeline** to ingest, **chunk, and index document content** using a **sliding window chunking strategy** for improved context boundary preservation during retrieval.
- Implementing **vector embeddings with cosine similarity search** for efficient **semantic document retrieval**, enabling context-aware question generation at scale.
- Integrating **Mistral LLM via Ollama** to auto-generate syllabus-aligned questions from source documents, **targeting significant reduction in manual authoring time**.

Bulk Question Extraction & Processing System (React · Python · NLP)

- Doubled team throughput from ~200 to 400–500 questions/day** by engineering an end-to-end automation pipeline — the single largest productivity gain delivered at the company.
- Applied **Sentence Transformers (all-MiniLM-L6-v2)** for **NLP-based text embedding and deduplication**, reducing redundant content in the processed question bank.
- Built a **React validation UI** enabling editors to audit, correct, and approve extracted questions before bulk submission, ensuring data accuracy.

The Learning Freak — Web Platform (Angular · Node.js · MongoDB)

- Led **end-to-end full stack development** of a multi-role educational platform, designing a **scalable MVC architecture** to support independent scaling of frontend and backend services.
- Engineered **RESTful APIs** for dynamic content delivery and implemented **JWT authentication with RBAC**, securing access across admin, educator, and student roles.
- Eliminated **Angular memory leaks** by auditing **RxJS subscriptions** and enforcing cleanup via **ngOnDestroy**; added **localStorage persistence** for multi-step forms.
- Extended backend APIs to support a **Flutter mobile application**, contributing **cross-platform feature development** and maintaining data consistency between web and mobile.

BornWhiz Technologies — Frontend Developer Intern

Sep 2024 – Feb 2025

Chidambaram, India

- Built a library of reusable, responsive **Angular UI components** used across multiple product screens, reducing per-feature development time.
- Integrated frontend with **backend REST APIs**, implementing **error handling and loading states** for improved application reliability.
- Built **complex reactive forms** using **Angular Reactive Forms** with custom validators and real-time error feedback, improving data integrity.
- Participated in **code reviews** and **Agile sprint cycles**, delivering production-level features in a fast-paced startup environment.

PERSONAL PROJECTS

Google Sheets API Dashboard — Angular, TypeScript, Google Sheets API

[Live Demo](#)

Interactive dashboard visualizing live expense data from Google Sheets — KPI cards, dynamic sortable tables, fully responsive.

Portfolio Contact API — Node.js, Express.js, MongoDB, Nodemailer

[Live Demo](#)

Production REST API for contact forms — input validation, CORS configuration, automated email notifications via Nodemailer.

Expense Tracker SPA — React.js, JavaScript, HTML5, CSS3

[Live Demo](#)

Responsive SPA for personal finance — income tracking, expense categorization, real-time balance computation, localStorage persistence.

EDUCATION

B.Sc. Computer Science — Shree Raghavendra Arts & Science College

2021 – 2024

Aggregate: 73.2%
